Senior DevOps Engineer | 2.5 Years of Experience

Professional Summary

Highly motivated and performance-driven DevOps Engineer with 2.5 years of experience in designing and managing infrastructure across AWS using tools like Terraform, Docker, Kubernetes, and GitHub Actions. Proven expertise in implementing scalable CI/CD pipelines, monitoring solutions, and supporting mission-critical production environments. Strong problem-solving skills with a foundation in mathematics and computer applications.

Technical Skills

Cloud Platforms: AWS (EC2, S3, EFS, CloudWatch, VPC, Amplify, API Gateway, Route53)

Infrastructure as Code: Terraform

Containers & Orchestration: Docker, Docker Swarm, Kubernetes

CI/CD: GitHub Actions, Jenkins

Monitoring: Prometheus, Grafana, Loki, Tempo, Netdata

Version Control: Git, GitHub

Scripting: Bash, Shell

DevSecOps Tools: Docker Image Scanning Tools

Other Tools & Platforms: NGINX, Xray, Artifactory, MongoDB, Elasticsearch, Cloudflare, Zero Trust, GoDaddy

Work Experience

DevOps Intern

March 2023 – April 2023

- Started DevOps journey with hands-on training in Docker, GitHub Actions, and shell scripting.
- Assisted in setting up CI/CD pipelines and deployed basic services on AWS EC2.
- Worked under senior engineers to monitor environments and troubleshoot basic issues.

DevOps Engineer

May 2023 – March 2024

- Managed AWS infrastructure for multiple environments using EC2, S3, and EFS.
- Automated deployments using GitHub Actions and Docker Swarm.

- Deployed microservices on Kubernetes and configured ingress, autoscaling, and monitoring.
- Containerized and deployed PHP-based legacy application on AWS ECS.
- Integrated Prometheus and Grafana for real-time cluster monitoring.

Senior DevOps Engineer

April 2024 – Present

- Designed and deployed a centralized observability stack (Prometheus, Loki, Tempo, Grafana) handling ~25TB/month data across multiple client environments.
- Automated daily infrastructure health checks, disk monitoring, and Elasticsearch red index recovery using custom Bash scripts.
- Actively supported production environments across 10+ hives by resolving issues related to scaling, resource limits, cron failures, and container health.
- Developed Slack-integrated alerting pipelines for system outages and usage thresholds.
- Worked closely with the development and QA teams to plan zero-downtime deployments and troubleshoot infra bottlenecks during peak loads.
- Led DevOps knowledge transfer (KT) sessions for newly onboarded engineers, documenting runbooks and standard operating procedures.

Projects

Internship Project – CI/CD Automation using Docker

- Built CI/CD pipelines using GitHub Actions and Docker for basic web applications.
- Gained hands-on experience with container lifecycle, automation, and basic AWS deployment.

Reflik – Client Project (As DevOps Engineer)

- Containerized legacy PHP application and deployed on AWS ECS with autoscaling and secure IAM roles.
- Implemented CI/CD workflows using GitHub Actions for efficient deployment and rollback.
- Integrated AWS CloudWatch for performance monitoring and automated alerting.

Jips – Client Project (As DevOps Engineer)

- Deployed Kubernetes-based microservice architecture including Odoo, Keycloak, and swf-jitips (API service).
- Created and maintained Helm charts, Kubernetes manifests, and ingress configurations.
- Enabled autoscaling and implemented resource limits and monitoring with Prometheus and Grafana.

Elasticsuite – Client Project (As Senior DevOps Engineer)

Deployed full observability suite (Prometheus, Grafana, Loki, Tempo) for client 'Elasticsuite' across 17+ environments, handling ~25TB/month data.

- Set up alerting, dashboarding, and log pipelines across multiple production hives.
- Ensured zero-downtime deployments in production through proactive monitoring.
- Automated multiple manual tasks using Shell scripting, GitHub Actions, and Jenkins.

Disk Usage & Index Health Automation (As Senior DevOps Engineer)

- Developed Bash scripts to monitor disk usage, scan client data, and fix Elasticsearch red indices.
- Integrated with Slack for automated daily infra health reporting.

Education

- Master of Computer Applications (MCA)
- Bachelor of Science (Mathematics)
